1 Data Pre-Processing

2 Hyper-Parameters Optimization

Here we want to search for the best hyperparams that our model uses to fit the training data which helps to maximize the accuracy and minimize the loss.

hyper-Parameters list here is :

```
batch_sizes = [16,32]
learning_rates =[0.1,0.01,0.05,0.001]
Epochs = 100
```
